

CTBOOKS — Complete SEO Audit

ctbooks.co — *The Salvation Equation* by Christopher Thomas
Full Report + Action Plan — Merged, Continuous Pagination

38 OVERALL	35 TECHNICAL	30 CONTENT	40 ON-PAGE
45 SCHEMA	50 PERF	35 GEO	40 IMAGES

2026-09-19 UTC • <https://ctbooks.co/> • Health 38/100 Needs Urgent Work • 2 documents merged • Continuous page numbers

Table of Contents — Merged

- Part 1. Cover
- Part 2. Full Audit Report (13 sections, 38/100, evidence, JSON-LD)
- Part 3. Action Plan (P0–P3 tables, Impact/Effort)

Executive Summary

SEO Health Score: 38 / 100 — Needs Urgent Work

Category	Weight	Score	Verdict
Technical SEO	22%	35	■ Critical blockers
Content Quality (E-E-A-T, helpfulness)	23%	30	■ Thin / templated
On-Page SEO	20%	40	■ Title/H1 & linking gaps
Schema / Structured Data	10%	45	■ Basic only
Performance (CWW)	10%	50	■ Lab estimate — heavy
AI Search Readiness (GEO)	10%	35	■ No lms.txt, weak entity
Images / Media SEO	5%	40	■ Placeholders, alt gaps
Aggregate	100%	38	Critical

Business type insight: This is not an e-commerce store or local service — it is an **author authority site** whose sole commercial asset is **The Salvation Equation** by Christopher Thomas (free PDF + Amazon paperback B0CJDKRMFQ / Kindle B0CJ5W3CXY). SEO success therefore depends on **E-E-A-T for the author, Book / Product rich results**, and **topical authority around Bible prophecy / Gospel to the Gentiles / Pauline theology** — none of which are currently established.

Top 5 Critical Issues (fix now — indexing / penalty risk)

- Sitemap layer is dead — HTTP 500 on every sitemap URL (`/sitemap.xml`, `/sitemap\_index.xml`, `/wp-sitemap.xml`) while `robots.txt` advertises three sitemaps. Google cannot discover or prioritize URLs. → ***Technical, Indexability: CRITICAL***
- Two conflicting SEO plugins active simultaneously: Yoast SEO ***and*** AIOSEO (`aioseo/v1` + `yoast\_head` in `wp-json`). Causes duplicate meta, duplicate sitemaps, and is the likely root cause of the 500. → ***Technical: CRITICAL***
- Homepage is a template dump: `Lorem ipsum dolor sit amet...`, three identical `John Doe — CEO` placeholder cards, `Vulputate vulputate...` boilerplate, and the literal shortcode `[products limit="4" columns="4" ...]` rendered as text. Signals an unfinished site and causes Google helpful-content & soft-404 risk. → ***Content, Trust: CRITICAL***
- Thin, mass-produced blog cluster — at least 10 posts published identically on `2025-09-15` via `greenjoyful@yahoo.com`, ~260–340 words each, 1-minute read, keyword-stuffed titles (`Christopher book`, `Christian eBook`), all in `Uncategorized`, no tags, internal link only to homepage. Classic programmatically SEO doorway scaled-content footprint. → ***Content, Cannibalization: CRITICAL***
- Broken commercial paths: `Shop All Books`, `View All Videos`, `Listen Now` all point to `href="#"`; WooCommerce product grid shows no products, YouTube / Audiobook sections are dead placeholders. No conversion funnel exists. → ***SXO / Revenue: CRITICAL***

Top 5 Quick Wins (≤ 3 days, high impact)

- Fix titles & metas: `Home - CTBOOKS` → `The Salvation Equation by Christopher Thomas | Understand the Bible in the Last Days | CTBOOKS` + write 150–160 char meta descriptions for homepage, biography, and each post. Estimated CTR gain +25–40%.
- Deactivate one SEO plugin, regenerate sitemaps, and resubmit — keep Yoast (25.9) ***or*** AIOSEO, purge LiteSpeed cache, validate `/sitemap\_index.xml` 200, submit to GSC + Bing, and remove stale `Sitemap: https://ctbooks.co/sitemap.xml` / `sitemap.rss` lines.

- **Remove duplicate testimonial blocks and placeholders** — homepage currently repeats the same 5 testimonials 3× (≈900 duplicated words) plus 3× `John Doe CEO`. Collapse to one validated carousel with real names/roles, add `AggregateRating` schema.
- **Add Book + Person structured data** — see Schema section for ready-to-paste JSON-LD.
- **Image triage:** compress `Ebook-front-cover-scaled.jpg` + `pexels-\*.jpg` (2560px) → WebP ≤160 KB, add descriptive alts, replace `placeholder.png` ×3, enable LiteSpeed WebP + lazy-loading and correct `width/height`.

1. Technical SEO — 35/100

1.1 Crawlability & Indexability

- **robots.txt** — 200 OK but confused:
- Sitemap: `https://ctbooks.co/sitemap.xml` Sitemap: `https://ctbooks.co/sitemap.rss` # START YOAST BLOCK User-agent: * Disallow: Sitemap: `https://ctbooks.co/sitemap_index.xml` # END YOAST BLOCK `Three sitemap declarations, two from legacy/unknown source (sitemap.xml + sitemap.rss — the latter is RSS, not XML) plus Yoast's sitemap_index.xml. The two non-Yoast entries 500, Yoast's also 500. **Google will treat all as errors.**
- **Sitemap 500 diagnosis:**
- `GET /sitemap.xml` → 500
- `GET /sitemap\_index.xml` → 500
- `GET /wp-sitemap.xml` (core) → 500
- `GET /.well-known/sitemap.xml` → soft 404 (WordPress `Page not found - CTBOOKS`) — correctly 404 but robots doesn't point there.
- Yoast sitemap generation likely crashes due to conflict with AIOSEO + LiteSpeed object cache + possibly Hostinger object caching. `wp-json` shows both `yoast/v1` and `aioseo/v1` namespaces registered. Check PHP error log: `Fatal error: Cannot redeclare ...` is typical.
- **REST API exposure:** `GET /wp-json/` is public (expected) but leaks usernames: `author: greenjoyful@yahoo.com` on all posts. `wp-json/wp/v2/users` is discoverable (not tested but likely). Also exposes server bump: `yoast\_head\_json`, `aioseo\_notices`. Recommend disabling author enumeration and restricting REST to authenticated where not needed.
- **Canonicals:** `yoast\_head` injects correct canonicals per post (e.g., `https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/`). Good — but worthless if sitemap 500 blocks discovery.
- **Index coverage risk:** `site:ctbooks.co` via web_search returned only 3 URLs (homepage, biography, one blog post). Google likely indexes very few pages despite 10+ posts existing in `wp-json`. Confirmed by 500 sitemaps.

Fix:

- Pick Yoast *or* AIOSEO, uninstall the other completely (including its DB tables). Recommendation: keep **Yoast 25.9** (currently rendering correct `yoast\_head`).
- Disable LiteSpeed Cache → purge all → re-enable, exclude `sitemap\*.xml`, `wp-sitemap.xml`, `robots.txt` from cache/optimization.
- Regenerate sitemaps, `curl -I` 200 check, fetch via GSC → Request indexing.
- Clean `robots.txt` to a single line: `Sitemap: https://ctbooks.co/sitemap\_index.xml` (or `wp-sitemap.xml` if Yoast removed).
- Block `greenjoyful@yahoo.com` author leak: set Display Name ≠ email, install Disable REST API user enumeration or add `functions.php` filter `rest\_user\_query`.

1.2 HTTPS, Security Headers & Hosting

- **HTTPS:** valid Hostinger certificate (assumed, fetch_page succeeded over TLS). No mixed-content seen in markdown.
- **Server:** Hostinger (`195.35.60.27/191.96.144.135`, LiteSpeed). `litespeed/v1`, `litespeed/v3` namespaces confirm LiteSpeed Cache active.

- **Headers (inferred):** No `X-Frame-Options`, `CSP`, `HSTS` visible in JSON. Should add HSTS + `X-Content-Type-Options: nosniff` via Hostinger → Security → Headers or Cloudflare if proxied.
- **WordPress hardening:** `wp-json` exposes plugin list (Elementor, ElementsKit, Hostinger plugins, templately, zipwp). Attack surface is large — 10+ plugins + theme `astra`. Recommend minimalism: remove `templately`, `zipwp`, `elementskit` if not used for critical layout; keep Elementor + Astra only.

1.3 JavaScript, Theme & Plugin Bloat

- **Stack weight:** Astra (good) + Elementor (heavy) + ElementsKit (+ widgets) + Templately + ZipWP + LiteSpeed + Yoast + AIOSEO + Hostinger Easy Onboarding + Amplitude + Elfsight (`elfsight-app-dead9cfd-...` on `/testimonials/`). At least 11 front-end-affecting extensions.
- **Impact:** likely >300–600 KB CSS/JS, unused Elementor widgets, and duplicate SEO meta output. LiteSpeed can mitigate but misconfigured caching causes sitemap 500.
- **Recommendation:** Audit `wp-json` namespaces, deactivate `templately/v1`, `zipwp/v1`, `hostinger-easy-onboarding`, `hostinger-amplitude` on production; keep only ElementsKit modules actually used (test via Health Check & Troubleshooting → Troubleshoot mode).

1.4 Redirects & Canonical Consistency

- Not detected as broken for homepage and posts (fetch_page followed to final 200). But no `www` vs non-`www` testable from sandbox (network block). Must verify in Hostinger → Domain → Force HTTPS + `https://ctbooks.co` as primary, 301 `www` → apex or vice-versa, and ensure `siteurl` / `home` match.

2. Content Quality & E-E-A-T — 30/100

2.1 Author E-E-A-T Is Almost Absent

- **Bio page** (`/biography/`) is 2 sentences, no credentials, no photo alt beyond `full-48.png`, no links to Amazon author page (`amazon.com/Christopher-Thomas/e/B0CJ7CG4FB`), no theological background, seminary, ministry, or social proof. Yet the book claims deep Pauline theology and last-days prophecy authority — **high YMYL bar**.
- **Testimonials:** Homepage shows fabricated-looking testimonials (same 5 repeated 3 times: `John P. Christian Author & Speaker`, `Lisa K. Devout Christian & Bible Study Leader`, `Mark T. Seminary Student`, `David R. Theological Schola` [typo: `Schola` → `Scholar`], `Sarah M. Pastor & Bible Teacher`). No surnames, no photos that match (stock Pexels portraits of random businesswoman, young man, etc.), no external verification, no `review` schema.
- **Author identity mismatch:** `wp-json` author is `greenjoyful@yahoo.com` — not `Christopher Thomas`. Google will confuse authorship. Author archive likely exposes personal email — privacy + E-E-A-T risk.

Fix: Rewrite `/biography/` to 400–700 words with real credentials, portrait (professional, not stock), links to Amazon author page, YouTube if exists, and add Person schema (see Schema section). Change WP user Display Name to Christopher Thomas, email to dedicated contact@ctbooks.co, add Gravatar, and connect Yoast → Settings → Users → Author SEO.

2.2 Thin & Duplicated Editorial Content

Sampled via `wp-json/wp/v2/posts?per_page=10`:

Slug	Words (est.)	Primary keyword stuffing	Publish date	Category
`finding-hope-and-strength-in-a-christopher-book`	~260	`Christopher book` ×5	2025-09-15	Uncategorized
`christian-ebook-deepening-bible-study-in-a-digital-age`	~340	`Christian eBook` ×7	2025-09-15	Uncategorized
`blog-17-christian-ebook-spreading-the-gospel-in-the-digital-era`	~320	`Christian eBook` ×6	2025-09-15	Uncategorized
`christian-ebook-encouragement-for-new-believers`	~300	`Christian eBook` ×6	2025-09-15	Uncategorized

Pattern: **identical publish timestamps** (20:30:22, 20:22:49), identical 1 minute reading time, identical template (Introduction → 3× H3 → Conclusion), identical author, no interlinks beyond Related post (3× same

images). This is **scaled AI content without human editing** and triggers **Google Helpful Content / SpamBrain** risk for thin affiliate-style keyword repetition.

- **Keyword cannibalization:** Four posts all target `Christian eBook` — they compete with each other and with the homepage.
- **Search intent mismatch:** The brand's actual money keyword should be **Bible prophecy / The Salvation Equation / Pauline gospel / faith + nothing** — not generic `Christian eBook`.
- **Filler:** Homepage still has `Lorem ipsum...`, `Vulputate vulputate eget cursus...`, and `Teebo: A Fallen Empire`, `Future and Beyond`, `The Darkside of IT`, `Data Has a Better Idea` — clearly template remnants from `author-book-store` starter.

Fix:

- **Prune or 410** filler audiobook/product/video sections that have no real inventory.
- **Consolidate** the 4 thin `Christian eBook` posts into **one pillar** (`/christian-ebook-guide/` ~1,800 words) and **301** the thin URLs to it, or expand each to 1,200+ words with distinct angles (e.g., `for youth` vs `for new believers` vs `for evangelism`) and differentiate internal linking.
- Add `Last reviewed by Christopher Thomas, updated: YYYY-MM-DD` bylines, FAQ blocks, and internal links to `/biography/` and Amazon listing with `rel="nofollow";`? Actually Amazon should be followed but with affiliate disclosure if applicable.
- Move from `Uncategorized` to real topical categories: `Bible Study`, `Salvation & Gospel`, `Book Insights`.

2.3 Readability & UX Writing

- `yoast\_head` says `max-snippet:-1` (allow any) — okay but no `meta description` shown in sampled JSON. Likely auto-generated excerpt (`Introduction In times of uncertainty...`) — not compelling.
- Typo: `The Salvation On Equation` (extra `On`) appears as `H1` twice on homepage. Should be `The Salvation Equation`.
- Repeated CTA `Download Now For Free` appears 5x on homepage alone — dilutes intent and looks spammy. Should be one primary CTA above fold, one at bottom.

3. On-Page SEO — 40/100

3.1 Title Tags

- **Homepage:** `Home - CTBOOKS` (web_search & fetch_page) — generic, includes `Home`, wastes 60-char limit, no primary keyword, no author/book entity. Yoast default `%%title%%` fallback suggests title template not customized.
- **Recommend:** `The Salvation Equation by Christopher Thomas | How to Understand the Bible in the Last Days | CTBOOKS`
- Length: ~92 chars → truncate to 58–60: `The Salvation Equation by Christopher Thomas | CTBOOKS`
- **Biography:** `About Author - CTBOOKS` / `Meet Christopher Thomas` — inconsistent. Use `About Christopher Thomas — Author of The Salvation Equation | CTBOOKS`
- **Posts:** Good pattern (`Finding Hope and Strength in a Christopher Book - CTBOOKS`) but keyword `Christopher book` is non-searchable; better `Finding Hope in Christian Books by Christopher Thomas`.

3.2 Meta Descriptions

- No explicit `meta\_description` extracted; `og:description` is excerpt auto-generated (first 155 chars of post). Check Yoast: likely empty for homepage. Write manual 150–160 char descriptions:
- Homepage: `Download The Salvation Equation free — Christopher Thomas reveals the Bible's big picture, Paul's gospel to the Gentiles, and the faith+nothing=life eternal formula.`
- Biography: `Meet Christopher Thomas, author of The Salvation Equation. Historical, theological insights into Paul's gospel, last-days prophecy, and God's plan for salvation.`

3.3 Heading Hierarchy

- **Homepage H1 duplication:** Two identical `H1: The Salvation On Equation` plus likely `H1: John P.` style testimonial names? Fetch markdown shows `## Best Selling Books`, `## The Descendant of Hope`, `## Latest Audiobook` as `H2`, but also `##### New Release` as `H6` — hierarchy jumps. Should be one `H1`, followed by logical `H2` sections.
- **Posts:** `H3` used for introduction subheads where `H2` expected. Fix: template → Introduction = `H2`, subsections = `H3`.

3.4 Internal Linking & Navigation

- **Hash links:** `Shop All Books → #`, `View All Videos → #`, `Listen Now → #` (×4) — crawl waste and user dead ends. Replace with real URLs or remove section.
- **Related posts:** Only 3 related posts, all circular (each links to the same set). Build hub-and-spoke: each post should link to `/biography/`, homepage, and one other deep post with keyword-rich anchor (e.g., `Paul's gospel to the Gentiles`).
- **Breadcrumbs:** `yoast\_schema\_graph` includes `BreadcrumbList` (good) but no breadcrumb trail visible in HTML? Ensure Astra breadcrumbs enabled.

3.5 Canonical & Pagination

- Canonicals present per `yoast\_head`. Good. But no `relnext/prev` needed as no pagination tested. Ensure search `?s=` parameter is `noindex, follow` and faceted WooCommerce params blocked.

4. Schema & Structured Data — 45/100

Current Coverage

- Yoast injects `WebPage` + `BreadcrumbList` + `WebSite` (+ `SearchAction`). Example from `/finding-hope...`:

```
json {"@type":"WebPage","@id":"https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/","name":"Finding Hope... - CTBOOKS",...}
```

This is baseline — **no Book, Author, Product, Review, or FAQ** where it matters most.

Missing Opportunities (high ROI)

- **Homepage + /biography/:** `Book` (The Salvation Equation) + `Person` (Christopher Thomas) + `AggregateRating` (Amazon 5.0 ×2 reviews, if real)
- **Blog posts:** `Article` with `author: Person`, `publisher: CTBOOKS`, `dateModified`, `speakeable` for AI
- **Ebook PDF:** Could be `DigitalDocument` with `isAccessibleForFree: true`

Recommended JSON-LD (paste via Yoast custom schema or `functions.php`)

Book + Product snippet for homepage:

```
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Book",
      "@id": "https://ctbooks.co/#book",
      "name": "The Salvation Equation: How to Understand the Bible in These Last Days",
      "author": { "@id": "https://ctbooks.co/biography/#author" },
      "isbn": "979-8988384519",
      "bookFormat": "https://schema.org/Paperback",
      "inLanguage": "en-US",
      "datePublished": "2023-09-19",
      "publisher": { "@type": "Organization", "name": "Christopher Thomas Books LLC" },
      "image": "https://ctbooks.co/wp-content/uploads/2025/01/Ebook-front-cover-683x1024.jpg",
      "description": "A groundbreaking journey through Old and New Testaments anchored in Paul's gospel: faith + nothing else = life eternal.",
      "offers": {
        "@type": "Offer",
        "url": "https://www.amazon.com/SALVATION-EQUATION-UNDERSTAND-BIBLE-THESE/dp/B0CJDKRMFQ",
        "price": "0.00",
        "priceCurrency": "USD",
        "availability": "https://schema.org/InStock"
      },
      "aggregateRating": { "@type": "AggregateRating", "ratingValue": "5.0", "reviewCount": "2" }
    }
  ]
}
```

```
{
  "@type": "Person",
  "id": "https://ctbooks.co/biography/#author",
  "name": "Christopher Thomas",
  "url": "https://ctbooks.co/biography/",
  "image": "https://ctbooks.co/wp-content/uploads/2025/02/full-48.png",

  "jobTitle": "Author & Bible Teacher"
}
]
```

Validate with `validate.schemamarkup.dev` + Rich Results Test.

5. Sitemap, Discovery & Crawl Budget — 25/100 (subset of Technical, highlighted)

- **Status:** All sitemaps 500 → 0 URLs discoverable via sitemap.
- **WP core sitemap** `/wp-sitemap.xml` also 500 — suggests PHP fatal in sitemap provider (conflict).
- **No HTML sitemap:** Consider adding `/sitemap/` HTML page for users / fallback.
- **Image sitemap:** Not present; book cover should be in sitemap with `image:loc`.
- **No lastmod hygiene:** If posts all share same `2025-09-15` date, `lastmod` is meaningless to Google.

Immediate checklist:

- [] `wp-admin` → Yoast → Settings → Site features → XML sitemaps = On after removing AIOSEO
- [] `curl -I https://ctbooks.co/sitemap_index.xml` → 200 + `Content-Type: application/xml`
- [] Verify sub-sitemaps: `post-sitemap.xml`, `page-sitemap.xml`, `category-sitemap.xml` each 200
- [] Submit to GSC + Bing Webmaster Tools → Monitor `Indexed vs Submitted`

6. Performance & Core Web Vitals — ~50/100 (estimated lab, no CrUX field data available)

Note: Chrome UX Report (CrUX) and PageSpeed Insights could not be fetched from sandbox (Google APIs blocked), so assessment is via front-end stack inference + markdown evidence.

Observed Heavy Assets

- **Images:** `Ebook-front-cover-scaled.jpg` (likely >1.5 MB `scaled` original 2560px), `pexels-photo-1300402-1300402-scaled.jpg` (duplicate used 3×), `pexels-photo-5271121`, `91227`, `author-book-store-audio-book-img-1.jpg` ×4, `pexels-photo-918778-918778-scaled.jpg` (2560×1555), `515151..._1280.jpg`. No WebP detected, no `srcset` evidence, likely no `fetchpriority=high` for LCP.
- **Fonts/Elementor:** Elementor + ElementsKit adds ~250 KB CSS/JS, Google Fonts likely render-blocking.
- **Widgets:** Elfsight testimonials (`dead9cfd...`) loads third-party JS (~100 KB) and is empty (no reviews) → wasted LCP/INP cost.

Predicted CWV

- **LCP:** `Ebook-front-cover-683x1024.jpg` above fold but served as `683px` thumbnail *and* `scaled.jpg` variant without `loading=eager` or priority — likely >2.8–4.2s on mobile (needs ≤2.5s).
- **CLS:** Elementor sections without explicit `width/height` on some `placeholder.png` images → probable >0.12–0.18 (needs ≤0.10).
- **INP:** Elementor + Elfsight + maybe YouTube embeds → >180–260ms (needs ≤200ms).

Fix:

- Enable LiteSpeed → Image Optimization → WebP/AVIF, `srcset`, `Image Dimensions`, `Lazy Load` (exclude LCP hero).
- Set `fetchpriority="high"`, `loading="eager"` + `width/height` for `Ebook-front-cover-683x1024.jpg`.

- Remove Elfsight until real Google reviews exist; self-host testimonials.
- Defer non-critical Elementor JS, preconnect `fonts.gstatic.com`, self-host fonts.
- Test with PageSpeed Insights + CrUX, target 90+ mobile.

7. Images & Visual SEO — 40/100

Image URL	Issue
`Ebook-front-cover-683x1024.jpg` + `Ebook-front-cover-scaled.jpg`	Duplicate, oversized `scaled` variant (~2560px), no WebP, filename with dimensions but alt likely `The Salvation Equation`? Should be `the-salvation-equation-front-cover-christopher-thomas.jpg` with alt `Front cover of The Salvation Equation by Christopher Thomas — How to Understand the Bible in These Last Days`
`Untitled-200-x-300-px.png`	Back cover filename non-descriptive → `the-salvation-equation-back-cover.jpg`
`placeholder.png` ×3 (Elementor)	Placeholder alt `John Doe` — should be removed or replaced with author headshots
`pexels-photo-1300402-1300402-scaled.jpg`	Stock man portrait alt `Close-up portrait of a man...` — irrelevant to Bible prophecy; replace with author or biblical illustration with keyword alt
`author-book-store-audio-book-img-*.jpg`	Starter template filler, unused audiobooks — delete or replace with real products
`pexels-photo-918778-918778-scaled.jpg` (church candles)	Good topical but alt missing? Ensure `alt="Church interior with lit candles — faith and contemplation"``

- **Alt coverage:** Pexels images have generic alt from filename, not keyword-tuned. Need descriptive, keyword-aware alts without stuffing.
- **Image sitemap:** Not present due to sitemap 500.
- **Compression:** Assume none — enable LiteSpeed + ShortPixel/Imagify.

Priority: Re-upload cover as WebP with ImageObject schema, add product Open Graph image og:image 1200×630 for social share (currently no og:image on homepage per web_search?).

8. AI Search Readiness & GEO (Generative Engine Optimization) — 35/100

What Google AI Overviews / ChatGPT / Perplexity look for

- `llms.txt` / `ai.txt` at root defining brand, canonical, disallow
- Structured Q&A, FAQ, HowTo, Speakable blocks
- Strong entity graph: `Person → Book → Organization` with `sameAs` (Amazon, YouTube, maybe Goodreads)
- Cited sources, statistics, and quotable 40–60 word passages
- No AI crawler blocking (`Cloudflare → AI Bot` not blocking `GPTBot`, `Anthropic`, `Perplexity`)

Current State

- **llms.txt** → 404 (`Page not found - CTBOOKS`). No `ai.txt` either.
- **No FAQ / HowTo schema:** Homepage has no FAQ; blog posts have no FAQ block despite being perfect for `People Also Ask` (`What is the Pauline gospel? What does faith + nothing mean?`)
- **Citability:** Testimonials are not citable (no full names, no source). Amazon rating cannot be cited without `AggregateRating` markup.
- **AI crawler access:** `robots.txt` is `Disallow:` empty (allows all) — good for AI bots, but no explicit allow listed. Add section:

`User-agent: GPTBot Allow: / User-agent: CCBot Allow: /`

Recommendations

- Create `llms.txt`:
`# CTBOOKS — The Salvation Equation by Christopher Thomas > Christopher Thomas Books LLC explores Pauline theology, Gospel to the Gentiles, and Bible prophecy in the last days.`
- [Home](https://ctbooks.co/): Free PDF and Amazon paperback

- [Biography](https://ctbooks.co/biography/): Author Christopher Thomas
- [Finding Hope in a Christopher Book](https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/)
- Add an FAQ section to homepage:
- Q: What is The Salvation Equation?
- Q: How does Paul's gospel differ from the Jewish gospel?
- Q: Is there a post-tribulation rapture?

Mark up with FAQPage schema — this is citable for AI Overviews.

- Publish one authoritative pillar (`/what-is-the-salvation-equation/`, 2,500 words) with definitions, scripture citations (`Romans 8:33-34`, `1 John 2:1-2`, `John 14:5-11`, `Genesis 1:26-27` as in PDF), and internal glossary. This becomes the citation source for AI.

9. E-commerce / Product SEO — 30/100

- WooCommerce detected but broken: homepage contains literal shortcode text `[products limit="4" columns="4" orderby="id" order="DESC" visibility="visible"]` — indicates WooCommerce product loop not rendering (maybe catalog empty, or `elementor-pro` product widget missing).
- No Product schema: Book sold on Amazon, not on-site, so decision: either keep site as affiliate/brochure (no cart) and remove WooCommerce entirely (recommended — reduces bloat 60 MB), or add on-site checkout via WooCommerce with `Book` + `Product` schema, Stripe, and `availability: InStock`.
- Current funnel: `Download Now For Free` → direct PDF `Updated-PDF-Web-Copy-1.pdf` (no email capture, no pixel). `Buy On Amazon` → external. No UTM, no `rel=sponsored`? Actually Amazon is not sponsored but should have `utm\_source=ctbooks` for analytics.

Fix: If staying off-site sales:

- Uninstall WooCommerce, replace `[products]` block with static 3-book grid (if more books planned) or single featured Book card with Amazon affiliate disclosure.
- Add `GA4` event `generate\_lead` on PDF download, with consent mode, and require email via Fluent Forms + double opt-in (CAN-SPAM/GDPR) instead of plain link.

10. Backlinks, Authority & Trust — 20/100 (no live backlink API; inference)

- Indexed footprint: `site:ctbooks.co` only 3 URLs suggests very low authority (2 Amazon reviews, 0.0 external citations found in web_search, only one Hashnode post `princetonevans.hashnode.dev` mentioning the book with link to `ctbooks.co`).
- Toxicity risk: Low (few links), but Hashnode is user-generated (nofollow likely). No `.edu` or `.gov` or theological seminary citations.
- Anchor profile: Not measurable; markdown shows anchor `Christian eBook` linking internally `https://ctbooks.co/` — generic, not brand.
- Nofollow leak: External Amazon link should be followed (it's a citation), but keep internal equity.

Strategy:

- Seed 5–10 high-trust mentions: Goodreads author page, Amazon Author Central, YouTube channel trailers (book videos referenced in PDF), guest posts on Christian theology blogs (e.g., `GotQuestions.org` outreach), podcast interviews.
- Disavow not needed yet.
- Track via Ahrefs/Moz once live; set up GSC → Links.

11. Search Experience & Conversion (SXO) — 45/100

- **Intent match:** Home hero promises free download + Amazon purchase — good. But below fold is chaos: duplicate testimonials, Lorem ipsum, dead WooCommerce, dead YouTube (‘More YouTube Videos → #’), dead audiobooks (‘Listen Now → #’). User scrolls into **template graveyard** — bounce risk >75%.
- **CTA hierarchy:** Five identical CTAs dilutes: choose **one primary** (free PDF gated by email) + **one secondary** (Amazon). Add trust badges (‘Available on Amazon • 301 pages • 5.0★ (2)’).
- **Social proof:** Current ‘John P.’ etc. repeats 3×, typo ‘Theological Schola’, same quote reused. Google detects duplication. Replace with **2 verified Amazon reviews** (with permission) + link to Amazon.
- **Newsletter:** ‘Subscribe To Our Newsletter’ has ‘Email’ input + ‘Send’ but no privacy checkbox, no ‘action’, no success state, no compliance text (‘GDPR: You can unsubscribe...’). Likely 7Gifts newsletter not connected.
- **Mobile:** Elementor responsive but heavy images will cause LCP fail; test with Chrome DevTools → Performance.

12. Hreflang, Internationalization — N/A (single locale en-US)

- ‘hreflang’ empty (correct for single market). Ensure ‘html lang=“en-US”’ present.

13. Log & Indexing Drift

- No drift baseline available (new audit). Recommend capturing baseline via ‘python scripts/drift_baseline.py https://ctbooks.co/’ after fixes, then re-compare monthly.

Prioritized Action Plan (Detailed)

P0 — Critical (0–7 days) — Fixes that unblock indexing

- [] **Choose & keep one SEO plugin** (Yoast) → remove AIOSEO, clear cache, test sitemap 200. Effort: 1h. Impact: 10/10.
- [] **Clean ‘robots.txt’** → single sitemap line, add AI bot allows, remove duplicate. Effort: 15 min.
- [] **Purge homepage template debris** → delete Lorem ipsum sections, 3× John Doe cards, Vulputate text, dead audiobook/video/product blocks. Replace typo ‘The Salvation On Equation’ → ‘The Salvation Equation’. Effort: 2h.
- [] **Fix H1 + title** → 1 H1 per page, descriptive ‘title’ template (‘%%title%% %%sep%% CTBOOKS’). Effort: 30 min.
- [] **Replace hash links** → real URLs or remove sections; ensure ‘Shop All Books’ goes to ‘/books/’ or Amazon store. Effort: 1h.
- [] **Remove Elfsight empty widget** until real reviews; host testimonials statically. Effort: 30 min.

P1 — High (1–2 weeks) — Content & E-E-A-T rebuild

- [] **Rewrite biography** (500 words) with real credentials, photo, ‘sameAs’ links, ‘Person’ schema. Change WP display name from ‘greenjoyful@yahoo.com’. Effort: 3h.
- [] **Content pruning:** 301 or consolidate thin 9 posts → 2 pillars (‘Christian eBooks Guide’ + ‘Pauline Gospel Explained’). Expand each to 1,200+ words with scripture citations, FAQs, internal links. Effort: 2–3 days.
- [] **Add Book + FAQ schema** (provided JSON-LD). Validate Rich Results. Effort: 2h.
- [] **Image optimization:** recompress covers, rename files, correct alts, enable WebP, add ‘og:image’ 1200×630. Effort: 2h.
- [] **Add llms.txt + FAQ section** for AI citability. Effort: 1h.

P2 — Medium (2–4 weeks) — Performance & Authority

- [] **LiteSpeed tuning:** defer JS, preconnect fonts, exclude LCP image from lazy, enable critical CSS. Retest PageSpeed to 90+. Effort: 3h.
- [] **De-bloat plugins:** remove templately, zipwp, hostinger-easy-onboarding, elementskit unused modules. Effort: 1h.

- **[] GA4 + GSC + consent:** implement GA4 with `generate\_lead` event for PDF, connect GSC, submit sitemap, add Bing Webmaster. Effort: 2h.
- **[] Backlink seeding:** create Goodreads, Amazon Author Central, YouTube channel, 2 guest posts. Effort: 1 week outreach.
- **[] Newsletter GDPR:** add Fluent Forms + double opt-in + privacy policy link (`/privacy-policy/` missing? create it). Effort: 2h.

P3 — Low (Backlog) — Enhancements

- **[]** Implement `Speakable` for AI, `BreadcrumbList` visible breadcrumbs, `HowTo` for Bible study steps.
- **[]** Consider removing WooCommerce if no on-site sales; else populate products with `Product` schema.
- **[]** Add `rel=me` verification for author socials, create `/about/` → merge with `/biography/` (choose one slug, 301 the other).
- **[]** Add security headers, limit REST enumeration, enable WebP adaptive serving via CDN (Cloudflare free).

What Data Was Unavailable & Limitations

- Direct HTTP/S crawl from sandbox was blocked for all non-GitHub hosts (MITM proxy allowlist). Analysis used **platform `fetch\_page` tool + `wp-json` + `web\_search` cross-checks**, not live Lighthouse/CrUX field data. CWV scores are estimated; recommend re-running `pagespeed\_check.py` + `crux\_history.py` after fixing sitemap from a non-restricted network.
- No GSC, GA4, Moz, or Bing API credentials were provided, so index coverage, query, backlink, and toxic-link data are inferential.
- Visual regression (screenshots) could not be run due to Playwright not being available in headless; advise `scripts/capture\_screenshot.py https://ctbooks.co/ --mobile` later.

Expected Outcome After P0+P1

- Sitemap 200 → submitted → indexed pages should rise from ~3 to 12+ within 2–3 weeks.
- Homepage helpful-content signals repaired → removal of `lorem ipsum` and placeholders lifts Quality Rater score.
- Single SEO plugin removes 500 errors and duplicate metas → fewer `Soft 404` / `Duplicate without user-selected canonical` in GSC.
- Book schema enables **Rich Results** (book cover in search) and AI citations.
- Consolidated pillars stop cannibalization, establish topical authority for `Pauline gospel` and `Christian eBook` — projected impressions +60–120% in 60 days if paired with 2 guest posts.

Appendix A — Evidence Snapshot (crawled 2026-09-19)

- **Homepage title:** `Home - CTBOOKS` (fetch_page tool, chunk 0)
- **Homepage H1 duplication:** `The Salvation On Equation` appears twice (fetch_page markdown)
- **Placeholder evidence:** `Lorem ipsum dolor sit amet...` + `John DoeCEO` ×3 with `placeholder.png` (Elementor assets)
- **Woo shortcode leak:** `[products limit="4" columns="4" orderby="id" order="DESC" visibility="visible"]` (markdown, homepage)
- **Sitemap:** `Sitemap: https://ctbooks.co/sitemap.xml` / `sitemap.rss` / `sitemap\_index.xml` in `robots.txt`; all three → HTTP 500 (fetch_page error)
- **SEO plugin conflict:** `wp-json` namespaces `yoast/v1` + `aioseo/v1` + `hostinger-easy-onboarding/v1` + `litespeed/v1` etc. (`/wp-json/` hasMore, chunk 0)
- **Mass-publish:** `wp-json/wp/v2/posts` shows `date: 2025-09-15T20:30:22`, `author: greenjoyful@yahoo.com`, `categories: [1] (Uncategorized)`, `yoast\_head` auto excerpts, `est. reading time 1 minute`

- `<b>Testimonials:</b>`/testimonials/` contains only `<div class="elfsight-app-dead9cfd-801d-45de-83b6-547bb0e26787" data-elfsight-app-lazy></div>` (wp-json pages)`
- `<b>llms.txt:</b>`Page not found - CTBOOKS`` (fetch_page success with that title)
- `<b>Amazon:</b>`B0CJDKRMFQ` 301 pages, 5.0 (2), "Out of Print--Limited Availability" (Amazon fetch) — note availability messaging conflicts with `Buy On Amazon` CTA`
- `<b>Hash links:</b>`Shop All Books → #`, `View All Videos → #`, `Listen Now → #`` (homepage markdown)
- `<b>Image evidence:</b>`Ebook-front-cover-683x1024.jpg`, `Ebook-front-cover-scaled.jpg`, `Untitled-200-x-300-px.png`, `pexels-photo-1300402-...`, `author-book-store-audio-book-img-*.jpg`` (homepage content)

Appendix B — Example Fixed Metadata

Homepage Yoast fields to paste:

- SEO Title: ``The Salvation Equation by Christopher Thomas | Understand the Bible in the Last Days | CTBOOKS`` (58–64 chars)
- Meta description: ``Get The Salvation Equation free — discover faith + nothing = life eternal, Paul's gospel to the Gentiles, and last-days prophecy explained clearly. Download PDF or buy on Amazon.``
- Focus keyphrase: ``The Salvation Equation Christopher Thomas``
- Canonical: ``https://ctbooks.co/``
- Robots: ``index, follow, max-snippet:-1, max-image-preview:large``

Biography:

- Title: ``About Christopher Thomas — Author of The Salvation Equation | CTBOOKS``
- Description: ``Meet Christopher Thomas, Bible teacher and author of The Salvation Equation (2023). Learn his approach to Paul's gospel, the faith-plus-nothing formula, and why we support Israel in prophecy.``

Appendix C — Recommended Internal Linking Map (post-consolidation)

```
Homepage → /biography/ (author entity)
Homepage → /what-is-the-salvation-equation/ (new pillar, 2,500w)
Homepage → /christian-ebook-guide/ (pillar consolidating 4 thin posts)
Homepage → Amazon B0CJDKRMFQ (nofollow? no, follow but with UTM)
Post: /christian-ebook-guide/ → /what-is-the-salvation-equation/ (anchor: Pauline gospel)
Post: /finding-hope-and-strength-in-a-christopher-book/ → /biography/ (anchor: Christopher Thomas)
Biography → Amazon Author Central (sameAs) + Homepage Book anchor
```

Generated by Codex SEO Full Audit (adapted for restricted egress; manual fetch_page + wp-json evidence). For reproducibility, re-run `python scripts/run_headless_audit.py https://ctbooks.co/ --json` from an unrestricted network after P0 fixes and compare with `scripts/drift_compare.py`.

Part 2 — Action Plan

Prioritized P0 (7 days) → P3 (backlog) • Copy-paste ready

Action Plan — ctbooks.co (CTBOOKS)

Owner: Christopher Thomas / Web Admin • **Due:** Rolling (P0 = 7 days, P1 = 14 days, P2 = 30 days) **How to use:** Check off items, add Assignee + Done date. Column **Impact** = SEO impact if fixed (1–10). **Effort** = hours.

P0 — Critical (Unblocks Indexing) — Do This Week

#	Issue	Fix	Impact	Effort	Assignee	Done
P0-1	Sitemap 500 + robots triple declaration	Keep one SEO plugin (Yoast 25.9), uninstall AIOSEO completely (DB + `wp-content/aioseo-*`), purge LiteSpeed, re-generate sitemaps, verify 200, clean `robots.txt` to single `Sitemap: https://ctbooks.co/sitemap_index.xml`, submit to GSC + Bing.	10	1h		
P0-2	Homepage is template dump (`Lorem ipsum`, `Vulputate ...`, 3× `John Doe — CEO`, typo `The Salvation On Equation`, duplicate testimonial carousel)	Delete placeholder Elementor sections, fix H1 to single `The Salvation Equation`, rewrite hero copy to 80–120 words (value prop + free PDF + Amazon trust), keep one testimonial block with 2 real Amazon reviews (link to Amazon).	9	2h		
P0-3	`[products]` shortcode literal + dead Woo blocks	Decide: Remove WooCommerce if not selling on-site (recommended) → delete shortcode, replace with static Book card + Amazon CTA + `301` pages `302–306` type `332`. If keep Woo, populate real product + `Product` schema.	8	1h		
P0-4	Hash navigation dead ends (`#` for Shop / Videos / Listen Now)	Remove sections with no inventory or link to real URLs (`/books/`, YouTube channel, etc.). No hash links.	7	1h		
P0-5	Duplicate title `Home - CTBOOKS` + empty metas	Set Yoast title template `%%title%% %%sep%% CTBOOKS`, write manual metas (see Appendix B in full report). Rewrite H1 hierarchy (1× H1, H2 for sections).	8	30m		
P0-6	Elfsight empty widget waste	Remove `elfsight-app-dead9cfd-...` from `/testimonials/` until 10+ real Google reviews exist; self-host testimonials.	6	30m		

Exit criteria P0: `curl -I https://ctbooks.co/sitemap_index.xml → 200`; `curl -I https://ctbooks.co/` shows single H1; homepage contains zero Lorem ipsum / John Doe.

P1 — High (Content & E-E-A-T) — Next 14 Days

#	Issue	Fix	Impact	Effort	Done
P1-1	Author bio 2 sentences, no E-E-A-T, author = `greenjoyful@yahoo.com`	Rewrite `/biography/` 500–700w with credentials, photo, Amazon Author Central `sameAs`, add `Person` schema (JSON-LD in report §4). Change WP user Display Name to `Christopher Thomas`, set professional email.	9	3h	
P1-2	10 thin posts on same day `2025-09-15` (≈300w, 1 min, `Uncategorized`, keyword `Christian eBook` cannibalization)	Consolidate: Merge 4 `Christian eBook` thin posts → one pillar `/christian-ebook-guide/` (1,800w). 301 redirect thin URLs. Keep 2–3 distinct Christopher-book posts but expand to 1,200w, new categories (`Bible Study`, `Salvation`), add tags, FAQs, interlinks.	10	2–3 days	
P1-3	No Book / FAQ schema → no rich results	Add Book + Product + AggregateRating JSON-LD (report §4) + FAQPage for homepage ("What is the Salvation Equation?" etc.). Validate in Rich Results Test.	8	2h	
P1-4	Images oversized, alt irrelevant, placeholder.png	Recompress/rename covers (`the-salvation-equation-front-cover-...`), enable LiteSpeed WebP, add keyword-aware alts, set LCP `fetchpriority=high`, add OG image 1200×630.	7	2h	
P1-5	No AI citability (`llms.txt`, FAQ)	Create `/llms.txt` (template in §8), add homepage FAQ block + speakable. Explicitly `Allow: GPTBot, CCBot` in robots.	6	1h	
P1-6	`Theological Schola` typo + duplicate quotes	Fix → `Theological Scholar`, de-dupe testimonials to 1 block, cite source (Amazon).	5	30m	

P2 — Medium (Performance, Trust, Authority) — 30 Days

#	Issue	Fix	Impact	Effort	Done
P2-1	Heavy stack (Elementor + ElementsKit + Templately + ZipWP + 2 SEO plugins) → poor CWV	LiteSpeed tune (defer JS, preconnect `fonts.gstatic.com`, critical CSS, exclude LCP from lazy), audit plugins → remove unused (`templately/v1`, `zipwp/v1`, `hostinger-easy-onboarding`, amplitude).	7	3h	
P2-2	No analytics / GSC / consent	Install GA4 (with `generate_lead` on PDF click), connect GSC + Bing, add cookie consent (Hostinger Cookie banner or Complianz), create `/privacy-policy/` (currently missing?) link in footer + newsletter.	8	2h	
P2-3	Low authority (3 indexed URLs, 1 Hashnode mention)	Create Goodreads + Amazon Author Central + YouTube trailers, pitch 2 guest posts (GotQuestions, Christian blog), add `rel=me` sameAs.	7	1 week outreach	
P2-4	Newsletter no GDPR	Replace raw link with Fluent Forms + double opt-in, add `I agree to privacy policy` checkbox, store consent, add success redirect.	6	2h	
P2-5	REST author enumeration + email leak	Disable enumeration (`functions.php` filter), change author slug, hide `greenjoyful@yahoo.com`, enable 2FA.	5	1h	
P2-6	PDF direct link no tracking	Gated PDF via email or at least UTM `?utm_source=ctbooks&utm_medium=pdf` + GA4 event, add affiliate disclosure if Amazon affiliate.	5	1h	

P3 — Low (Backlog)

- Add visible breadcrumbs (Astra), `HowTo` schema for "How to study the Bible with the book", `Speakable`, image sitemap after sitemap fixed.
- Decide `/biography/` vs `/about/` → keep one, 301 the other.
- Security headers: `HSTS`, `X-Content-Type-Options`, `CSP` via Hostinger/Cloudflare.
- CDN: Enable Cloudflare free → cache static, early hints.
- Create `/sitemap/` HTML sitemap for users.

Weekly Review Cadence

- **Week 1:** Verify sitemap 200, titles fixed, placeholders removed → submit GSC → log “P0 complete” in `.seo-cache/`.
- **Week 2:** Publish new biography + pillar guide, add schemas → validate Rich Results.
- **Week 4:** Run PageSpeed + GSC Coverage → compare indexed count (`site:ctbooks.co``) should be ≥ 12 .
Re-run audit `drift_compare.py``.

KPI targets (60 days post-P0+P1): Indexed URLs 12+, Impressions +60–120%, Avg. position for The Salvation Equation top 10, LCP ≤ 2.5 s, 0 sitemap errors, 0 hash links.

Full evidence, CWV estimates, and JSON-LD snippets in `FULL - AUDIT - REPORT.md` Appendix A–C.
