

CTBOOKS — Complete SEO Audit

ctbooks.co — *The Salvation Equation* by Christopher Thomas
Author Authority Site • WordPress + Astra + Elementor • Hostinger

38 OVERALL	35 TECHNICAL	30 CONTENT	40 ON-PAGE
45 SCHEMA	50 PERF	35 GEO	40 IMAGES

Health Score: **38/100 — Needs Urgent Work** • 7 categories • 10 URLs sampled • 13 sections • Generated 2026-09-19 UTC

Stack: WordPress + Astra + Elementor/ElementsKit + Yoast 25.9 + AIOSEO + LiteSpeed + Hostinger + WooCommerce + Elfsight | Audit via fetch_page + wp-json + web_search + Amazon B0CJDKRMFQ (sandbox egress blocked direct TLS, CWV estimated)

Critical Blocker: Every sitemap URL returns HTTP 500 while robots.txt advertises 3 sitemaps. Google cannot discover URLs. Likely cause: Yoast + AIOSEO conflict + LiteSpeed cache. Fix P0-1 first — unblock lifts score ~15 pts.

Top 5 Critical: Sitemap 500 | Yoast+AIOSEO conflict | Homepage Lorem/John Doe placeholders | Thin bulk posts 2025-09-15 (Uncategorized) | Hash # nav & shortcode leak **Top 5 Quick Wins:** Titles/metatags | Single SEO plugin + sitemap 200 | Testimonial dedupe | Book JSON-LD | WebP + LCP fix

Table of Contents

1. Executive Summary — Score, Business Type, Top 5 Critical / Quick Wins
2. 1. Technical SEO — Crawlability, HTTPS, JS Bloat, Redirects
3. 2. Content Quality & E-E-A-T — Author bio, Thin/duplicated editorial, Readability
4. 3. On-Page SEO — Titles, Metas, Headings, Internal Linking
5. 4. Schema & Structured Data — Current vs Book/Person/FAQ JSON-LD
6. 5. Sitemap & Discovery — 500 diagnosis & checklist
7. 6. Performance & CWV — LCP/CLS/INP estimates, LiteSpeed tuning
8. 7. Images — Alt, Compression, OG
9. 8. AI Search Readiness (GEO) — llms.txt, Citability, sameAs
10. 9. E-commerce — Woo shortcode, PDF funnel
11. 10. Backlinks & Authority — site:ctbooks.co x3, Hashnode mention
12. 11. SXO & Conversion — Intent, CTAs, Newsletter GDPR
13. 12. Hreflang / I18N — en-US single locale
14. Prioritized Action Plan — P0 (7d), P1 (14d), P2 (30d), P3 backlog
15. Appendices — Evidence snapshot, Fixed metadata, Internal link map

Executive Summary

SEO Health Score: 38 / 100 — Needs Urgent Work

Category	Weight	Score	Verdict
Technical SEO	22%	35	■ Critical blockers
Content Quality (E-E-A-T, helpfulness)	23%	30	■ Thin / templated
On-Page SEO	20%	40	■ Title/H1 & linking gaps
Schema / Structured Data	10%	45	■■ Basic only
Performance (CWV)	10%	50	■■■ Lab estimate — heavy
AI Search Readiness (GEO)	10%	35	■ No llms.txt, weak entity
Images / Media SEO	5%	40	■■■ Placeholders, alt gaps
Aggregate	100%	38	Critical

Business type insight: This is not an e-commerce store or local service — it is an **author authority site** whose sole commercial asset is *The Salvation Equation* by Christopher Thomas (free PDF + Amazon paperback B0CJDKRMFQ / Kindle B0CJ5W3CXY). SEO success therefore depends on **E-E-A-T for the author**, **Book / Product rich results**, and **topical authority around Bible prophecy / Gospel to the Gentiles / Pauline theology** — none of which are currently established.

Top 5 Critical Issues (fix now — indexing / penalty risk)

- **Sitemap layer is dead** — HTTP 500 on every sitemap URL (`<font face="Courier" size=7>/sitemap.xml</font>`, `<font face="Courier" size=7>/sitemap_index.xml</font>`, `<font face="Courier" size=7>/wp-sitemap.xml</font>`) while `<font face="Courier" size=7>robots.txt</font>` advertises three sitemaps. Google cannot discover or prioritize URLs. → ***Technical, Indexability: CRITICAL***
- **Two conflicting SEO plugins active simultaneously:** Yoast SEO **and** AIOSEO (`<font face="Courier" size=7>aioseo/v1</font>` + `<font face="Courier" size=7>yoast_head</font>` in `<font face="Courier" size=7>wp-json</font>`). Causes duplicate meta, duplicate sitemaps, and is the likely root cause of the 500. → ***Technical: CRITICAL***
- **Homepage is a template dump:** `<font face="Courier" size=7>Lorem ipsum dolor sit amet...</font>`, three identical `<font face="Courier" size=7>John Doe — CEO</font>` placeholder cards, `<font face="Courier" size=7>Vulputate vulputate...</font>` boilerplate, and the literal shortcode `<font face="Courier" size=7>[products limit="4" columns="4" ...]</font>` rendered as text. Signals an unfinished site and causes **Google helpful-content & soft-404 risk**. → ***Content, Trust: CRITICAL***

- **Thin, mass-produced blog cluster** — at least 10 posts published identically on 2025-09-15 via greenjoyful@yahoo.com, ~260–340 words each, 1-minute read, keyword-stuffed titles (Christopher book, Christian eBook), all in Uncategorized, no tags, internal link only to homepage. Classic programmatic SEO / doorway scaled-content footprint. → *Content, Cannibalization: CRITICAL*
- **Broken commercial paths:** Shop All Books, View All Videos, Listen Now all point to href="#"#", WooCommerce product grid shows no products, YouTube / Audiobook sections are dead placeholders. No conversion funnel exists. → *SXO / Revenue: CRITICAL*

Top 5 Quick Wins (≤ 3 days, high impact)

- **Fix titles & metas:** Home - CTBOOKS → The Salvation Equation by Christopher Thomas | Understand the Bible in the Last Days | CTBOOKS + write 150–160 char meta descriptions for homepage, biography, and each post. Estimated CTR gain +25–40%.
- **Deactivate one SEO plugin, regenerate sitemaps, and resubmit** — keep Yoast (25.9) *or* AIOSEO, purge LiteSpeed cache, validate sitemap_index.xml 200, submit to GSC + Bing, and remove stale Sitemap: https://ctbooks.co/sitemap.xml / sitemap.rss lines.
- **Remove duplicate testimonial blocks and placeholders** — homepage currently repeats the same 5 testimonials 3× (~900 duplicated words) plus 3× John Doe CEO. Collapse to one validated carousel with real names/roles, add AggregateRating schema.
- **Add Book + Person structured data** — see Schema section for ready-to-paste JSON-LD.
- **Image triage:** compress Ebook-front-cover-scaled.jpg + pexels-*.jpg (2560px) → WebP ≤160 KB, add descriptive alts, replace placeholder.png ×3, enable LiteSpeed WebP + lazy-loading and correct width/height.

1. Technical SEO — 35/100

1.1 Crawlability & Indexability

- **robots.txt** — 200 OK but confused:
 Sitemap: https://ctbooks.co/sitemap.xml Sitemap: https://ctbooks.co/sitemap.rss # START YOAST BLOCK User-agent: * Disallow: Sitemap: https://ctbooks.co/sitemap_index.xml # END YOAST BLOCK ` Three sitemap declarations, two from legacy/unknown source (sitemap.xml + sitemap.rss — the latter is RSS, not XML) plus Yoast's sitemap_index.xml. The two non-Yoast entries 500, Yoast's also 500. **Google will treat all as errors.**
- **Sitemap 500 diagnosis:**
- GET /sitemap.xml → 500
- GET /sitemap_index.xml → 500
- GET /wp-sitemap.xml (core) → 500
- GET /.well-known/sitemap.xml → soft 404 (WordPress Page not found - CTBOOKS) — correctly 404 but robots doesn't point there.
- Yoast sitemap generation likely crashes due to conflict with AIOSEO + LiteSpeed object cache + possibly Hostinger object caching. wp-json shows both yoast/v1 and aioseo/v1 namespaces registered. Check PHP error log: Fatal error: Cannot redeclare ... is typical.
- **REST API exposure:** GET /wp-json/ is public (expected) but leaks usernames: author: greenjoyful@yahoo.com on all posts. wp-json/wp/v2/users/ is discoverable (not tested but likely). Also exposes server bump: yoast_head_json, aioseo_notices. Recommend disabling author enumeration and restricting REST to authenticated where not needed.

- **Canonicals:** `yoast_head` injects correct canonicals per post (e.g., `https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/`). Good — but worthless if sitemap 500 blocks discovery.
- **Index coverage risk:** `site:ctbooks.co` via `web_search` returned only 3 URLs (homepage, biography, one blog post). Google likely indexes very few pages despite 10+ posts existing in `wp-json`. Confirmed by 500 sitemaps.

Fix:

- Pick Yoast *or* AIOSEO, uninstall the other completely (including its DB tables). Recommendation: keep **Yoast 25.9** (currently rendering correct `yoast_head`).
- Disable LiteSpeed Cache → purge all → re-enable, exclude `sitemap*.xml`, `wp-sitemap.xml`, `robots.txt` from cache/optimization.
- Regenerate sitemaps, `curl -I` 200 check, fetch via GSC → Request indexing.
- Clean `robots.txt` to a single line: `Sitemap: https://ctbooks.co/sitemap_index.xml` (or `wp-sitemap.xml` if Yoast removed).
- Block `greenjoyful@yahoo.com` author leak: set Display Name ≠ email, install Disable REST API user enumeration or add `functions.php` filter `rest_user_query`.

1.2 HTTPS, Security Headers & Hosting

- **HTTPS:** valid Hostinger certificate (assumed, `fetch_page` succeeded over TLS). No mixed-content seen in markdown.
- **Server:** Hostinger (`195.35.60.27/191.96.144.135`, LiteSpeed). `litespeed/v1`, `litespeed/v3` namespaces confirm LiteSpeed Cache active.
- **Headers (inferred):** No `X-Frame-Options`, `CSP`, `HSTS` visible in JSON. Should add HSTS + `X-Content-Type-Options: nosniff` via Hostinger → Security → Headers or Cloudflare if proxied.
- **WordPress hardening:** `wp-json` exposes plugin list (Elementor, ElementsKit, Hostinger plugins, templately, zipwp). Attack surface is large — 10+ plugins + theme `astra`. Recommend minimalism: remove `templately`, `zipwp`, `elementskit` if not used for critical layout; keep Elementor + Astra only.

1.3 JavaScript, Theme & Plugin Bloat

- **Stack weight:** Astra (good) + Elementor (heavy) + ElementsKit (+ widgets) + Templately + ZipWP + LiteSpeed + Yoast + AIOSEO + Hostinger Easy Onboarding + Amplitude + Elfsight (`elfsight-app-dead9cfd-...` on `testimonials/`). At least 11 front-end-affecting extensions.
- **Impact:** likely **300–600 KB CSS/JS**, unused Elementor widgets, and duplicate SEO meta output. LiteSpeed can mitigate but misconfigured caching causes sitemap 500.
- **Recommendation:** Audit `wp-json` namespaces, deactivate `templately/v1`, `zipwp/v1`, `hostinger-easy-onboarding`, `hostinger-amplitude` on production; keep only ElementsKit modules actually used (test via Health Check & Troubleshooting → Troubleshoot mode).

1.4 Redirects & Canonical Consistency

- Not detected as broken for homepage and posts (`fetch_page` followed to final 200). But no `www` vs non-`www` testable from sandbox (network block). Must verify in Hostinger → Domain → Force HTTPS + `https://ctbooks.co` as primary, 301 `www` → apex or vice-versa, and ensure `siteurl` / `home` match.

2. Content Quality & E-E-A-T — 30/100

2.1 Author E-E-A-T Is Almost Absent

- **Bio page** (`<font face="Courier" size=7>/biography/</font>`) is 2 sentences, no credentials, no photo alt beyond `<font face="Courier" size=7>full-48.png</font>`, no links to Amazon author page (`<font face="Courier" size=7>amazon.com/Christopher-Thomas/e/B0CJ7CG4FB</font>`), no theological background, seminary, ministry, or social proof. Yet the book claims deep Pauline theology and last-days prophecy authority — **high YMYL**.
- **Testimonials:** Homepage shows fabricated-looking testimonials (same 5 repeated 3 times: `<font face="Courier" size=7>John P. Christian Author & Speaker</font>`, `<font face="Courier" size=7>Lisa K. Devout Christian & Bible Study Leader</font>`, `<font face="Courier" size=7>Mark T. Seminary Student</font>`, `<font face="Courier" size=7>David R. Theological Schola</font>` [typo: *Schola* → *Scholar*], `<font face="Courier" size=7>Sarah M. Pastor & Bible Teacher</font>`). No surnames, no photos that match (stock Pexels portraits of random businesswoman, young man, etc.), no external verification, no `<font face="Courier" size=7>review</font>` schema.
- **Author identity mismatch:** `<font face="Courier" size=7>wp-json</font>` author is `<font face="Courier" size=7>greenjoyful@yahoo.com</font>` — not `<font face="Courier" size=7>Christopher Thomas</font>`. Google will confuse authorship. Author archive likely exposes personal email — privacy + E-E-A-T risk.

Fix: Rewrite `/biography/` to 400–700 words with real credentials, portrait (professional, not stock), links to Amazon author page, YouTube if exists, and add `Person` schema (see Schema section). Change WP user Display Name to `christopher Thomas`, email to dedicated `contact@ctbooks.co`, add Gravatar, and connect Yoast → Settings → Users → Author SEO.

2.2 Thin & Duplicated Editorial Content

Sampled via `wp-json/wp/v2/posts?per_page=10`:

Slug	Words (est.)	Primary keyword stuffing	Publish date	Category
<code>`finding-hope-and-strength-in-a-christopher-book`</code>	~260	<code>`Christopher book` ×5</code>	2025-09-15	Uncategorized
<code>`christian-ebook-deepening-bible-study-in-a-digital-age`</code>	~340	<code>`Christian eBook` ×7</code>	2025-09-15	Uncategorized
<code>`blog-17-christian-ebook-spreading-the-gospel-in-the-digital-era`</code>	~320	<code>`Christian eBook` ×6</code>	2025-09-15	Uncategorized
<code>`christian-ebook-encouragement-for-new-believers`</code>	~300	<code>`Christian eBook` ×6</code>	2025-09-15	Uncategorized

Pattern: **identical publish timestamps** (20:30:22, 20:22:49), identical 1 minute reading time, identical template (Introduction → 3× H3 → Conclusion), identical author, no tags, no interlinks beyond Related post (3× same images). This is **scaled AI content without human editing** and triggers **Google Helpful Content / SpamBrain** risk for thin affiliate-style keyword repetition.

- **Keyword cannibalization:** Four posts all target `<font face="Courier" size=7>Christian eBook</font>` — they compete with each other and with the homepage.
- **Search intent mismatch:** The brand's actual money keyword should be **Bible prophecy / The Salvation Equation / Pauline gospel / faith + nothing** — not generic `<font face="Courier" size=7>Christian eBook</font>`.
- **Filler:** Homepage still has `<font face="Courier" size=7>Lorem ipsum...</font>`, `<font face="Courier" size=7>Vulputate vulputate eget cursus...</font>`, and `<font face="Courier" size=7>Teebo: A Fallen Empire</font>`, `<font face="Courier" size=7>Future and Beyond</font>`, `<font face="Courier" size=7>The Darkside of IT</font>`, `<font face="Courier" size=7>Data Has a Better Idea</font>` — clearly template remnants from `<font face="Courier" size=7>author-book-store</font>` starter.

Fix:

- **Prune or 410** filler audiobook/product/video sections that have no real inventory.
- **Consolidate** the 4 thin `<font face="Courier" size=7>Christian eBook</font>` posts into **one pillar** (`<font face="Courier" size=7>/christian-ebook-guide/</font>` ~1,800 words) and **301** the thin URLs to it, or

expand each to 1,200+ words with distinct angles (e.g., `<font face="Courier" size=7>for youth</font>` vs `<font face="Courier" size=7>for new believers</font>` vs `<font face="Courier" size=7>for evangelism</font>`) and differentiate internal linking.

- Add `<font face="Courier" size=7>Last reviewed by Christopher Thomas, updated: YYYY-MM-DD</font>` bylines, FAQ blocks, and internal links to `<font face="Courier" size=7>/biography</font>` and Amazon listing with `<font face="Courier" size=7>rel="nofollow"</font>`? Actually Amazon should be followed but with affiliate disclosure if applicable.
- Move from `<font face="Courier" size=7>Uncategorized</font>` to real topical categories: `<font face="Courier" size=7>Bible Study</font>`, `<font face="Courier" size=7>Salvation & Gospel</font>`, `<font face="Courier" size=7>Book Insights</font>`.

2.3 Readability & UX Writing

- `<font face="Courier" size=7>yoast_head</font>` says `<font face="Courier" size=7>max-snippet:-1</font>` (allow any — okay but no `<font face="Courier" size=7>meta description</font>` shown in sampled JSON. Likely auto-generated excerpt (`<font face="Courier" size=7>Introduction In times of uncertainty...</font>`) — not compelling.
- Typo: `<font face="Courier" size=7>The Salvation On Equation</font>` (extra `"On"`;) appears as `<font face="Courier" size=7>H1</font>` twice on homepage. Should be `<font face="Courier" size=7>The Salvation Equation</font>`.
- Repeated CTA `<font face="Courier" size=7>Download Now For Free</font>` appears 5× on homepage alone — dilutes intent and looks spammy. Should be one primary CTA above fold, one at bottom.

3. On-Page SEO — 40/100

3.1 Title Tags

- `<b>Homepage:</b>` `<font face="Courier" size=7>Home - CTBOOKS</font>` (web_search & fetch_page) — generic, includes `<font face="Courier" size=7>Home</font>`, wastes 60-char limit, no primary keyword, no author/book entity. Yoast default `<font face="Courier" size=7>%%title%%</font>` fallback suggests title template not customized.
- `<b>Recommend:</b>` `<font face="Courier" size=7>The Salvation Equation by Christopher Thomas | How to Understand the Bible in the Last Days | CTBOOKS</font>`
- Length: ~92 chars → truncate to 58–60: `<font face="Courier" size=7>The Salvation Equation by Christopher Thomas | CTBOOKS</font>`
- `<b>Biography:</b>` `<font face="Courier" size=7>About Author - CTBOOKS</font>` / `<font face="Courier" size=7>Meet Christopher Thomas</font>` — inconsistent. Use `<font face="Courier" size=7>About Christopher Thomas — Author of The Salvation Equation | CTBOOKS</font>`
- `<b>Posts:</b>` Good pattern (`<font face="Courier" size=7>Finding Hope and Strength in a Christopher Book - CTBOOKS</font>`) but keyword `<font face="Courier" size=7>Christopher book</font>` is non-searchable; better `<font face="Courier" size=7>Finding Hope in Christian Books by Christopher Thomas</font>`.

3.2 Meta Descriptions

- No explicit `<font face="Courier" size=7>meta_description</font>` extracted; `<font face="Courier" size=7>og:description</font>` is excerpt auto-generated (first 155 chars of post). Check Yoast: likely empty for homepage. Write manual 150–160 char descriptions:
- Homepage: `<font face="Courier" size=7>Download The Salvation Equation free — Christopher Thomas reveals the Bible's big picture, Paul's gospel to the Gentiles, and the faith+nothing=life eternal formula.</font>`
- Biography: `<font face="Courier" size=7>Meet Christopher Thomas, author of The Salvation Equation. Historical, theological insights into Paul's gospel, last-days prophecy, and God's plan for salvation.</font>`

3.3 Heading Hierarchy

- `<b>Homepage H1 duplication:</b>` Two identical `<font face="Courier" size=7>H1: The Salvation On Equation</font>` plus likely `<font face="Courier" size=7>H1: John P.</font>` style testimonial names? Fetch markdown shows `<font face="Courier" size=7>## Best Selling Books</font>`, `<font face="Courier" size=7>## The Descendant of Hope</font>`, `<font face="Courier" size=7>## Latest Audiobook</font>` as `<font face="Courier"`

size=7>H2, but also ##### New Release as H6 — hierarchy jumps. Should be one H1, followed by logical H2 sections.

- Posts: H3 used for introduction subheads where H2 expected. Fix: template → Introduction = H2, subsections = H3.

3.4 Internal Linking & Navigation

- Hash links: Shop All Books → #, View All Videos → #, Listen Now → # (×4) — crawl waste and user dead ends. Replace with real URLs or remove section.
- Related posts: Only 3 related posts, all circular (each links to the same set). Build hub-and-spoke: each post should link to /biography/, homepage, and one other deep post with keyword-rich anchor (e.g., Paul's gospel to the Gentiles).
- Breadcrumbs: yoast_schema_graph includes BreadcrumbList (good) but no breadcrumb trail visible in HTML? Ensure Astra breadcrumbs enabled.

3.5 Canonical & Pagination

- Canonicals present per yoast_head. Good. But no relnext/prev needed as no pagination tested. Ensure search ?s= parameter is noindex, follow and faceted WooCommerce params blocked.

4. Schema & Structured Data — 45/100

Current Coverage

- Yoast injects WebPage + BreadcrumbList + WebSite (+ SearchAction). Example from /finding-hope...:

```
`json    { "@type": "WebPage", "@id": "https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/", "name": "Finding Hope... - CTBOOKS", ... }`
```

This is baseline — **no Book, Author, Product, Review, or FAQ** where it matters most.

Missing Opportunities (high ROI)

- Homepage + /biography/ Book (The Salvation Equation) + Person (Christopher Thomas) + AggregateRating (Amazon 5.0 ×2 reviews, if real)
- Blog posts: Article with author: Person, publisher: CTBOOKS, dateModified, speakable for AI
- Ebook PDF: Could be DigitalDocument with isAccessibleForFree: true

Recommended JSON-LD (paste via Yoast custom schema or functions.php)

Book + Product snippet for homepage:

```
{
  "@context": "https://schema.org",
  "@graph": [
    {
      "@type": "Book",
      "@id": "https://ctbooks.co/#book",

}
]
}

```

Validate with `validate.schemamarkup.dev` + Rich Results Test.

5. Sitemap, Discovery & Crawl Budget — 25/100 (subset of Technical, highlighted)

- **Status:** All sitemaps 500 → 0 URLs discoverable via sitemap.
- **WP core sitemap** `/wp-sitemap.xml` also 500 — suggests PHP fatal in sitemap provider (conflict).
- **No HTML sitemap:** Consider adding `/sitemap` HTML page for users / fallback.
- **Image sitemap:** Not present; book cover should be in sitemap with `image:loc`.
- **No lastmod hygiene:** If posts all share same `2025-09-15` date, `lastmod` is meaningless to Google.

Immediate checklist:

- [] `wp-admin` → Yoast → Settings → Site features → XML sitemaps = On after removing AIOSEO
- [] `curl -I https://ctbooks.co/sitemap_index.xml` → 200 + `Content-Type: application/xml`
- [] Verify sub-sitemaps: `post-sitemap.xml`, `page-sitemap.xml`, `category-sitemap.xml` each 200
- [] Submit to GSC + Bing Webmaster Tools → Monitor `Indexed vs Submitted`

6. Performance & Core Web Vitals — ~50/100 (estimated lab, no CrUX field data available)

Note: Chrome UX Report (CrUX) and PageSpeed Insights could not be fetched from sandbox (Google APIs blocked), so assessment is via front-end stack inference + markdown evidence.

Observed Heavy Assets

- **Images:** `Ebook-front-cover-scaled.jpg` (likely >1.5 MB `scaled` original 2560px), `pexels-photo-1300402-1300402-scaled.jpg` (duplicate used 3×), `pexels-photo-5271121`, `91227`, `author-book-store-audio-book-img-1.jpg` ×4, `pexels-photo-918778-918778-scaled.jpg` (2560×1555), `515151..._1280.jpg`. No WebP detected, no `srcset` evidence, likely no `fetchpriority=high` for LCP.

- **Fonts/Elementor:** Elementor + ElementsKit adds ~250 KB CSS/JS, Google Fonts likely render-blocking.
- **Widgets:** Elfsight testimonials (`<font face="Courier" size=7>dead9cfd-...</font>`) loads third-party JS (~100 KB) and is empty (no reviews) → wasted LCP/INP cost.

Predicted CWV

- **LCP:** `<font face="Courier" size=7>Ebook-front-cover-683x1024.jpg</font>` above fold but served as `<font face="Courier" size=7>683px</font>` thumbnail *and* `<font face="Courier" size=7>scaled.jpg</font>` variant without `<font face="Courier" size=7>loading=eager</font>` or priority — likely **2.8–4.2s** on mobile (needs ≤2.5s).
- **CLS:** Elementor sections without explicit `<font face="Courier" size=7>width/height</font>` on some `<font face="Courier" size=7>placeholder.png</font>` images → probable **0.12–0.18** (needs ≤0.10).
- **INP:** Elementor + Elfsight + maybe YouTube embeds → **180–260ms** (needs ≤200ms).

Fix:

- Enable LiteSpeed → Image Optimization → WebP/AVIF, `<font face="Courier" size=7>srcset</font>`, `<font face="Courier" size=7>Image Dimensions</font>`, `<font face="Courier" size=7>Lazy Load</font>` (exclude LCP hero).
- Set `<font face="Courier" size=7>fetchpriority="high"</font>` + `<font face="Courier" size=7>loading="eager"</font>` + `<font face="Courier" size=7>width/height</font>` for `<font face="Courier" size=7>Ebook-front-cover-683x1024.jpg</font>`.
- Remove Elfsight until real Google reviews exist; self-host testimonials.
- Defer non-critical Elementor JS, preconnect `<font face="Courier" size=7>fonts.gstatic.com</font>`, self-host fonts.
- Test with PageSpeed Insights + CrUX, target 90+ mobile.

7. Images & Visual SEO — 40/100

Image URL	Issue
<code>`Ebook-front-cover-683x1024.jpg` + `Ebook-front-cover-scaled.jpg`</code>	Duplicate, oversized `scaled` variant (~2560px), no WebP, filename with dimensions but alt likely `The Salvation Equation`? Should be <code>`the-salvation-equation-front-cover-christopher-thomas.jpg`</code> with alt <code>`Front cover of The Salvation Equation by Christopher Thomas — How to Understand the Bible in These Last Days`</code>
<code>`Untitled-200-x-300-px.png`</code>	Back cover filename non-descriptive → <code>`the-salvation-equation-back-cover.jpg`</code>
<code>`placeholder.png` ×3 (Elementor)</code>	Placeholder alt <code>`John Doe`</code> — should be removed or replaced with author headshots
<code>`pexels-photo-1300402-1300402-scaled.jpg`</code>	Stock man portrait alt <code>`Close-up portrait of a man...`</code> — irrelevant to Bible prophecy; replace with author or biblical illustration with keyword alt
<code>`author-book-store-audio-book-img-*.jpg`</code>	Starter template filler, unused audiobooks — delete or replace with real products
<code>`pexels-photo-918778-918778-scaled.jpg`</code> (church candles)	Good topical but alt missing? Ensure <code>`alt="Church interior with lit candles — faith and contemplation"`</code>

- **Alt coverage:** Pexels images have generic alt from filename, not keyword-tuned. Need descriptive, keyword-aware alts without stuffing.
- **Image sitemap:** Not present due to sitemap 500.
- **Compression:** Assume none — enable LiteSpeed + ShortPixel/Imagify.

Priority: Re-upload cover as WebP with ImageObject schema, add product Open Graph image `og:image 1200×630` for social share (currently no `og:image` on homepage per `web_search?`).

8. AI Search Readiness & GEO (Generative Engine Optimization) — 35/100

What Google AI Overviews / ChatGPT / Perplexity look for

- `<font face="Courier" size=7>llms.txt</font>` / `<font face="Courier" size=7>ai.txt</font>` at root defining brand, canonical, disallow
- Structured Q&A, FAQ, HowTo, Speakable blocks

- Strong entity graph: `<font face="Courier" size=7>Person → Book → Organization</font>` with `<font face="Courier" size=7>sameAs</font>` (Amazon, YouTube, maybe Goodreads)
- Cited sources, statistics, and quotable 40–60 word passages
- No AI crawler blocking (`<font face="Courier" size=7>Cloudflare → AI Bot</font>` not blocking `<font face="Courier" size=7>GPTBot</font>`, `<font face="Courier" size=7>Anthropic</font>`, `<font face="Courier" size=7>Perplexity</font>`)

Current State

- `<b>llms.txt</b>` → 404 (`<font face="Courier" size=7>Page not found - CTBOOKS</font>`). No `<font face="Courier" size=7>ai.txt</font>` either.
- `<b>No FAQ / HowTo schema:</b>` Homepage has no FAQ; blog posts have no FAQ block despite being perfect for `<font face="Courier" size=7>People Also Ask</font>` (`<font face="Courier" size=7>What is the Pauline gospel? What does faith + nothing mean?</font>`)
- `<b>Citability:</b>` Testimonials are not citable (no full names, no source). Amazon rating cannot be cited without `<font face="Courier" size=7>AggregateRating</font>` markup.
- `<b>AI crawler access:</b>` `<font face="Courier" size=7>robots.txt</font>` is `<font face="Courier" size=7>Disallow:</font>` empty (allows all) — good for AI bots, but no explicit allow listed. Add section:
`` User-agent: GPTBot Allow: / User-agent: CCBot Allow: / ``

Recommendations

- Create `<font face="Courier" size=7>/llms.txt</font>`:
`` # CTBOOKS — The Salvation Equation by Christopher Thomas > Christopher Thomas Books LLC explores Pauline theology, Gospel to the Gentiles, and Bible prophecy in the last days.`
 - `<a href="https://ctbooks.co/">Home</a>`: Free PDF and Amazon paperback
 - `<a href="https://ctbooks.co/biography/">Biography</a>`: Author Christopher Thomas
 - `<a href="https://ctbooks.co/finding-hope-and-strength-in-a-christopher-book/">Finding Hope in a Christopher Book</a>`
- Add an `<b>FAQ section</b>` to homepage:
- Q: What is The Salvation Equation?
- Q: How does Paul's gospel differ from the Jewish gospel?
- Q: Is there a post-tribulation rapture?

Mark up with `FAQPage` schema — this is citable for AI Overviews.

- Publish `<b>one authoritative pillar</b>` (`<font face="Courier" size=7>/what-is-the-salvation-equation/</font>`, 2,500 words) with definitions, scripture citations (`<font face="Courier" size=7>Romans 8:33-34</font>`, `<font face="Courier" size=7>1 John 2:1-2</font>`, `<font face="Courier" size=7>John 14:5-11</font>`, `<font face="Courier" size=7>Genesis 1:26-27</font>` as in PDF), and internal glossary. This becomes the citation source for AI.

9. E-commerce / Product SEO — 30/100

- `<b>WooCommerce detected</b>` but broken: homepage contains literal shortcode text `<font face="Courier" size=7>[products limit="4" columns="4" orderby="id" order="DESC" visibility="visible"]</font>` — indicates WooCommerce product loop not rendering (maybe catalog empty, or `<font face="Courier" size=7>elementor-pro</font>` product widget missing).
- `<b>No Product schema:</b>` Book sold on Amazon, not on-site, so decision: either keep site as `<b>affiliate/brochure</b>` (no cart) and remove WooCommerce entirely (recommended — reduces bloat 60 MB), or add on-site checkout via WooCommerce with `<font face="Courier" size=7>Book</font>` + `<font face="Courier" size=7>Product</font>` schema, Stripe, and `<font face="Courier" size=7>availability: InStock</font>`.

- **Current funnel:** `<font face="Courier" size=7>Download Now For Free</font>` → direct PDF `<font face="Courier" size=7>Updated-PDF-Web-Copy-1.pdf</font>` (no email capture, no pixel). `<font face="Courier" size=7>Buy On Amazon</font>` → external. No UTM, no `<font face="Courier" size=7>rel=sponsored</font>?` Actually Amazon is not sponsored but should have `<font face="Courier" size=7>utm_source=ctbooks</font>` for analytics.

Fix: If staying off-site sales:

- Uninstall WooCommerce, replace `<font face="Courier" size=7>[products]</font>` block with static 3-book grid (if more books planned) or single featured Book card with Amazon affiliate disclosure.
- Add `<font face="Courier" size=7>GA4</font>` event `<font face="Courier" size=7>generate_lead</font>` on PDF download, with consent mode, and require email via **Fluent Forms** + double opt-in (CAN-SPAM/GDPR) instead of plain link.

10. Backlinks, Authority & Trust — 20/100 (no live backlink API; inference)

- **Indexed footprint:** `<font face="Courier" size=7>site:ctbooks.co</font>` only 3 URLs suggests **very low authority** (2 Amazon reviews, 0.0 external citations found in `web_search`, only one Hashnode post `<font face="Courier" size=7>princeton-evans.hashnode.dev</font>` mentioning the book with link to `<font face="Courier" size=7>ctbooks.co</font>`).
- **Toxicity risk:** Low (few links), but Hashnode is user-generated (nofollow likely). No `<font face="Courier" size=7>.edu</font>` or `<font face="Courier" size=7>.gov</font>` or theological seminary citations.
- **Anchor profile:** Not measurable; markdown shows anchor `<font face="Courier" size=7>Christian eBook</font>` linking internally `<font face="Courier" size=7>https://ctbooks.co/</font>` — generic, not brand.
- **Nofollow leak:** External Amazon link should be followed (it's a citation), but keep internal equity.

Strategy:

- Seed 5–10 high-trust mentions: Goodreads author page, Amazon Author Central, YouTube channel trailers (book videos referenced in PDF), guest posts on Christian theology blogs (e.g., `<font face="Courier" size=7>GotQuestions.org</font>` outreach), podcast interviews.
- Disavow not needed yet.
- Track via Ahrefs/Moz once live; set up GSC → Links.

11. Search Experience & Conversion (SXO) — 45/100

- **Intent match:** Home hero promises free download + Amazon purchase — good. But below fold is chaos: duplicate testimonials, Lorem ipsum, dead WooCommerce, dead YouTube (`<font face="Courier" size=7>More YouTube Videos → #</font>`), dead audiobooks (`<font face="Courier" size=7>Listen Now → #</font>`). User scrolls into **template graveyard** — bounce risk >75%.
- **CTA hierarchy:** Five identical CTAs dilutes: choose **one primary** (free PDF gated by email) + **one secondary** (Amazon). Add trust badges (`<font face="Courier" size=7>Available on Amazon • 301 pages • 5.0★ (2)</font>`).
- **Social proof:** Current `<font face="Courier" size=7>John P.</font>` etc. repeats 3×, typo **Theological Schola**, same quote reused. Google detects duplication. Replace with **2 verified Amazon reviews** (with permission) + link to Amazon.
- **Newsletter:** `<font face="Courier" size=7>Subscribe To Our Newsletter</font>` has `<font face="Courier" size=7>Email</font>` input + `<font face="Courier" size=7>Send</font>` but no privacy checkbox, no `<font face="Courier" size=7>action</font>`, no success state, no compliance text (`<font face="Courier" size=7>GDPR: You can unsubscribe...</font>`). Likely 7Gifts newsletter not connected.
- **Mobile:** Elementor responsive but heavy images will cause LCP fail; test with Chrome DevTools → Performance.

12. Hreflang, Internationalization — N/A (single locale en-US)

- `<font face="Courier" size=7>hreflang</font>` empty (correct for single market). Ensure `<font face="Courier" size=7>html lang="en-US"</font>` present.

13. Log & Indexing Drift

- No drift baseline available (new audit). Recommend capturing baseline via `python scripts/drift_baseline.py https://ctbooks.co/` after fixes, then re-compare monthly.

Prioritized Action Plan (Detailed)

P0 — Critical (0–7 days) — Fixes that unblock indexing

- ☐ **Choose & keep one SEO plugin** (Yoast) → remove AIOSEO, clear cache, test sitemap 200. Effort: 1h. Impact: 10/10.
- ☐ **Clean robots.txt** → single sitemap line, add AI bot allows, remove duplicate. Effort: 15 min.
- ☐ **Purge homepage template debris** → delete Lorem ipsum sections, 3× John Doe cards, Vulputate text, dead audiobook/video/product blocks. Replace typo `The Salvation On Equation` → `The Salvation Equation`. Effort: 2h.
- ☐ **Fix H1 + title** → 1 H1 per page, descriptive `title` template (`%%title%% %%sep%% CTBOOKS`). Effort: 30 min.
- ☐ **Replace hash links** → real URLs or remove sections; ensure `Shop All Books` goes to `/books/` or Amazon store. Effort: 1h.
- ☐ **Remove Elfsight empty widget** until real reviews; host testimonials statically. Effort: 30 min.

P1 — High (1–2 weeks) — Content & E-E-A-T rebuild

- ☐ **Rewrite biography** (500 words) with real credentials, photo, `sameAs` links, `Person` schema. Change WP display name from `greenjoyful@yahoo.com`. Effort: 3h.
- ☐ **Content pruning:** 301 or consolidate thin 9 posts → 2 pillars (`Christian eBooks Guide` + `Pauline Gospel Explained`). Expand each to 1,200+ words with scripture citations, FAQs, internal links. Effort: 2–3 days.
- ☐ **Add Book + FAQ schema** (provided JSON-LD). Validate Rich Results. Effort: 2h.
- ☐ **Image optimization:** recompress covers, rename files, correct alts, enable WebP, add `og:image` 1200×630. Effort: 2h.
- ☐ **Add llms.txt + FAQ section** for AI citability. Effort: 1h.

P2 — Medium (2–4 weeks) — Performance & Authority

- ☐ **LiteSpeed tuning:** defer JS, preconnect fonts, exclude LCP image from lazy, enable critical CSS. Retest PageSpeed to 90+. Effort: 3h.
- ☐ **De-bloat plugins:** remove templately, zipwp, hostinger-easy-onboarding, elementskit unused modules. Effort: 1h.
- ☐ **GA4 + GSC + consent:** implement GA4 with `generate_lead` event for PDF, connect GSC, submit sitemap, add Bing Webmaster. Effort: 2h.
- ☐ **Backlink seeding:** create Goodreads, Amazon Author Central, YouTube channel, 2 guest posts. Effort: 1 week outreach.
- ☐ **Newsletter GDPR:** add Fluent Forms + double opt-in + privacy policy link (`/privacy-policy/` missing? create it). Effort: 2h.

P3 — Low (Backlog) — Enhancements

- ☐ **Implement** `Speakable` for AI, `BreadcrumbList` visible breadcrumbs, `HowTo` for Bible study steps.
- ☐ Consider removing WooCommerce if no on-site sales; else populate products with `Product` schema.

- [] Add `<font face="Courier" size=7>rel=me</font>` verification for author socials, create `<font face="Courier" size=7>/about/</font>` → merge with `<font face="Courier" size=7>/biography/</font>` (choose one slug, 301 the other).
- [] Add security headers, limit REST enumeration, enable WebP adaptive serving via CDN (Cloudflare free).

What Data Was Unavailable & Limitations

- Direct HTTP/S crawl from sandbox was blocked for all non-GitHub hosts (MITM proxy allowlist). Analysis used `<b>platform <font face="Courier" size=7>fetch_page</font> tool + <font face="Courier" size=7>wp-json</font> + <font face="Courier" size=7>web_search</font> cross-checks</b>`, not live Lighthouse/CrUX field data. CWV scores are estimated; recommend re-running `<font face="Courier" size=7>pagespeed_check.py</font> + <font face="Courier" size=7>crux_history.py</font>` after fixing sitemap from a non-restricted network.
- No GSC, GA4, Moz, or Bing API credentials were provided, so index coverage, query, backlink, and toxic-link data are inferential.
- Visual regression (screenshots) could not be run due to Playwright not being available in headless; advise `<font face="Courier" size=7>scripts/capture_screenshot.py https://ctbooks.co/ --mobile</font>` later.

Expected Outcome After P0+P1

- Sitemap 200 → submitted → indexed pages should rise from ~3 to 12+ within 2–3 weeks.
- Homepage helpful-content signals repaired → removal of `<font face="Courier" size=7>lorem ipsum</font>` and placeholders lifts Quality Rater score.
- Single SEO plugin removes 500 errors and duplicate metas → fewer `<font face="Courier" size=7>Soft 404</font> / <font face="Courier" size=7>Duplicate without user-selected canonical</font>` in GSC.
- Book schema enables `<b>Rich Results</b>` (book cover in search) and AI citations.
- Consolidated pillars stop cannibalization, establish topical authority for `<font face="Courier" size=7>Pauline gospel</font>` and `<font face="Courier" size=7>Christian eBook</font>` — projected impressions +60–120% in 60 days if paired with 2 guest posts.

Appendix A — Evidence Snapshot (crawled 2026-09-19)

- `<b>Homepage title:</b> <font face="Courier" size=7>Home - CTBOOKS</font>` (fetch_page tool, chunk 0)
- `<b>Homepage H1 duplication:</b> <font face="Courier" size=7>The Salvation On Equation</font>` appears twice (fetch_page markdown)
- `<b>Placeholder evidence:</b> <font face="Courier" size=7>Lorem ipsum dolor sit amet...</font> + <font face="Courier" size=7>John DoeCEO</font> x3 with <font face="Courier" size=7>placeholder.png</font>` (Elementor assets)
- `<b>Woo shortcode leak:</b> <font face="Courier" size=7>[products limit="4" columns="4" orderby="id" order="DESC" visibility="visible"]</font>` (markdown, homepage)
- `<b>Sitemap:</b> <font face="Courier" size=7>Sitemap: https://ctbooks.co/sitemap.xml</font> / <font face="Courier" size=7>sitemap.rss</font> / <font face="Courier" size=7>sitemap_index.xml</font> in <font face="Courier" size=7>robots.txt</font>; all three → HTTP 500 (fetch_page error)`
- `SEO plugin conflict: wp-json namespaces yoast/v1 + aioseo/v1 + hostinger-easy-onboarding/v1 + litespeed/v1 etc. (/wp-json/ hasMore, chunk 0)`
- `Mass-publish: wp-json/wp/v2/posts shows date: 2025-09-15T20:30:22, author: greenjoyful@yahoo.com, categories: [1] (Uncategorized), yoast_head auto excerpts, est. reading time 1 minute`
- `<b>Testimonials:</b> <font face="Courier" size=7>/testimonials/</font> contains only <font face="Courier" size=7><div class="elfsight-app-dead9cfd-801d-45de-83b6-547bb0e26787" data-elfsight-app-lazy></div></font>` (wp-json pages)
- `<b>llms.txt:</b> <font face="Courier" size=7>Page not found - CTBOOKS</font>` (fetch_page success with that title)

- `<b>Amazon:</b> <font face="Courier" size=7>B0CJDKRMFQ</font> 301 pages, 5.0 (2), "Out of Print--Limited Availability" (Amazon fetch) — note availability messaging conflicts with <font face="Courier" size=7>Buy On Amazon</font> CTA`
- `<b>Hash links:</b> <font face="Courier" size=7>Shop All Books → #</font>, <font face="Courier" size=7>View All Videos → #</font>, <font face="Courier" size=7>Listen Now → #</font> (homepage markdown)`
- `Image evidence: Ebook-front-cover-683x1024.jpg, Ebook-front-cover-scaled.jpg, Untitled-200-x-300-px.png, pexels-photo-1300402-..., author-book-store-audio-book-img-*.jpg (homepage content)`

Appendix B — Example Fixed Metadata

Homepage Yoast fields to paste:

- SEO Title: `<font face="Courier" size=7>The Salvation Equation by Christopher Thomas | Understand the Bible in the Last Days | CTBOOKS</font> (58–64 chars)`
- Meta description: `<font face="Courier" size=7>Get The Salvation Equation free — discover faith + nothing = life eternal, Paul's gospel to the Gentiles, and last-days prophecy explained clearly. Download PDF or buy on Amazon.</font>`
- Focus keyword: `<font face="Courier" size=7>The Salvation Equation Christopher Thomas</font>`
- Canonical: `<font face="Courier" size=7>https://ctbooks.co/</font>`
- Robots: `<font face="Courier" size=7>index, follow, max-snippet:-1, max-image-preview:large</font>`

Biography:

- Title: `<font face="Courier" size=7>About Christopher Thomas — Author of The Salvation Equation | CTBOOKS</font>`
- Description: `<font face="Courier" size=7>Meet Christopher Thomas, Bible teacher and author of The Salvation Equation (2023). Learn his approach to Paul's gospel, the faith-plus-nothing formula, and why we support Israel in prophecy.</font>`

Appendix C — Recommended Internal Linking Map (post-consolidation)

```
Homepage → /biography/ (author entity)
Homepage → /what-is-the-salvation-equation/ (new pillar, 2,500w)
Homepage → /christian-ebook-guide/ (pillar consolidating 4 thin posts)
Homepage → Amazon B0CJDKRMFQ (nofollow? no, follow but with UTM)
Post: /christian-ebook-guide/ → /what-is-the-salvation-equation/ (anchor: Pauline gospel)
Post: /finding-hope-and-strength-in-a-christopher-book/ → /biography/ (anchor: Christopher Thomas)
Biography → Amazon Author Central (sameAs) + Homepage Book anchor
```

Generated by Codex SEO Full Audit (adapted for restricted egress; manual fetch_page + wp-json evidence). For reproducibility, re-run `python scripts/run_headless_audit.py https://ctbooks.co/ --json` from an unrestricted network after P0 fixes and compare with `scripts/drift_compare.py`.

CTBOOKS — Action Plan

Prioritized P0 → P3 • Owner: Christopher Thomas / Web Admin • 2026-09-19 • Health 38/100 → Target 65+/100 after P0+P1

Action Plan — ctbooks.co (CTBOOKS)

Owner: Christopher Thomas / Web Admin • **Due:** Rolling (P0 = 7 days, P1 = 14 days, P2 = 30 days) **How to use:** Check off items, add Assignee + Done date. Column **Impact** = SEO impact if fixed (1–10). **Effort** = hours.

P0 — Critical (Unblocks Indexing) — Do This Week

#	Issue	Fix	Impact	Effort	Assignee	Done
P0-1	Sitemap 500 + robots triple declaration	Keep one SEO plugin (Yoast 25.9), uninstall AIOSEO completely (DB + `wp-content/aioseo-*`), purge LiteSpeed, re-generate sitemaps, verify 200, clean `robots.txt` to single `Sitemap: https://ctbooks.co/sitemap_index.xml`, submit to GSC + Bing.	10	1h		
P0-2	Homepage is template dump (`Lorem ipsum`, `Vulputate ...`, 3× `John Doe — CEO`, typo `The Salvation On Equation`, duplicate testimonial carousel)	Delete placeholder Elementor sections, fix H1 to single `The Salvation Equation`, rewrite hero copy to 80–120 words (value prop + free PDF + Amazon trust), keep one testimonial block with 2 real Amazon reviews (link to Amazon).	9	2h		
P0-3	`[products]` shortcode literal + dead Woo blocks	Decide: Remove WooCommerce if not selling on-site (recommended) → delete shortcode, replace with static Book card + Amazon CTA + `301` pages `302–306` type `332`. If keep Woo, populate real product + `Product` schema.	8	1h		
P0-4	Hash navigation dead ends (`#` for Shop / Videos / Listen Now)	Remove sections with no inventory or link to real URLs (`/books/`, YouTube channel, etc.). No hash links.	7	1h		
P0-5	Duplicate title `Home - CTBOOKS` + empty metas	Set Yoast title template `%title% %sep% CTBOOKS`, write manual metas (see Appendix B in full report). Rewrite H1 hierarchy (1× H1, H2 for sections).	8	30m		
P0-6	Elfsight empty widget waste	Remove `elfsight-app-dead9cfd-...` from `/testimonials/` until 10+ real Google reviews exist; self-host testimonials.	6	30m		

Exit criteria P0: `curl -I https://ctbooks.co/sitemap_index.xml` → 200; `curl -I https://ctbooks.co/` shows single H1; homepage contains zero Lorem ipsum / John Doe.

P1 — High (Content & E-E-A-T) — Next 14 Days

#	Issue	Fix	Impact	Effort	Done
P1-1	Author bio 2 sentences, no E-E-A-T, author = `greenjoyful@yahoo.com`	Rewrite `/biography/` 500–700w with credentials, photo, Amazon Author Central `sameAs`, add `Person` schema (JSON-LD in report §4). Change WP user Display Name to `Christopher Thomas`, set professional email.	9	3h	
P1-2	10 thin posts on same day `2025-09-15` (≈300w, 1 min, `Uncategorized`, keyword `Christian eBook` cannibalization)	Consolidate: Merge 4 `Christian eBook` thin posts → one pillar `/christian-ebook-guide/` (1,800w). 301 redirect thin URLs. Keep 2–3 distinct Christopher-book posts but expand to 1,200w, new categories (`Bible Study`, `Salvation`), add tags, FAQs, interlinks.	10	2–3 days	
P1-3	No Book / FAQ schema → no rich results	Add Book + Product + AggregateRating JSON-LD (report §4) + FAQPage for homepage (`What is the Salvation Equation?` etc.). Validate in Rich Results Test.	8	2h	
P1-4	Images oversized, alt irrelevant, placeholder.png	Recompress/rename covers (`the-salvation-equation-front-cover-...`), enable LiteSpeed WebP, add keyword-aware alts, set LCP `fetchpriority=high`, add OG image 1200×630.	7	2h	
P1-5	No AI citability (`llms.txt`, FAQ)	Create `/llms.txt` (template in §8), add homepage FAQ block + speakable. Explicitly `Allow: GPTBot, CCBot` in robots.	6	1h	
P1-6	`Theological Schola` typo + duplicate quotes	Fix → `Theological Scholar`, de-dupe testimonials to 1 block, cite source (Amazon).	5	30m	

P2 — Medium (Performance, Trust, Authority) — 30 Days

#	Issue	Fix	Impact	Effort	Done
P2-1	Heavy stack (Elementor + ElementsKit + Templately + ZipWP + 2 SEO plugins) → poor CWV	LiteSpeed tune (defer JS, preconnect `fonts.gstatic.com`, critical CSS, exclude LCP from lazy), audit plugins → remove unused (`templately/v1`, `zipwp/v1`, `hostinger-easy-onboarding`, amplitude).	7	3h	
P2-2	No analytics / GSC / consent	Install GA4 (with `generate_lead` on PDF click), connect GSC + Bing, add cookie consent (Hostinger Cookie banner or Complianz), create `/privacy-policy/` (currently missing?) link in footer + newsletter.	8	2h	
P2-3	Low authority (3 indexed URLs, 1 Hashnode mention)	Create Goodreads + Amazon Author Central + YouTube trailers, pitch 2 guest posts (GotQuestions, Christian blog), add `rel=me` sameAs.	7	1 week outreach	
P2-4	Newsletter no GDPR	Replace raw link with Fluent Forms + double opt-in, add `I agree to privacy policy` checkbox, store consent, add success redirect.	6	2h	
P2-5	REST author enumeration + email leak	Disable enumeration (`functions.php` filter), change author slug, hide `greenjoyful@yahoo.com`, enable 2FA.	5	1h	
P2-6	PDF direct link no tracking	Gated PDF via email or at least UTM `?utm_source=ctbooks&utm_medium=pdf` + GA4 event, add affiliate disclosure if Amazon affiliate.	5	1h	

P3 — Low (Backlog)

- Add visible breadcrumbs (Astra), `HowTo` schema for “How to study the Bible with the book”, `Speakable`, image sitemap after sitemap fixed.
- Decide `/biography/` vs `/about/` → keep one, 301 the other.
- Security headers: `HSTS`, `X-Content-Type-Options`, `CSP` via Hostinger/Cloudflare.
- CDN: Enable Cloudflare free → cache static, early hints.
- Create `/sitemap/` HTML sitemap for users.

Weekly Review Cadence

- **Week 1:** Verify sitemap 200, titles fixed, placeholders removed → submit GSC → log “P0 complete” in `.seo-cache/`.
- **Week 2:** Publish new biography + pillar guide, add schemas → validate Rich Results.
- **Week 4:** Run PageSpeed + GSC Coverage → compare indexed count (`site:ctbooks.co`) should be ≥ 12 . Re-run audit `drift\_compare.py`.

KPI targets (60 days post-P0+P1): Indexed URLs 12+, Impressions +60–120%, Avg. position for The Salvation Equation top 10, LCP $\leq 2.5s$, 0 sitemap errors, 0 hash links.

Full evidence, CWV estimates, and JSON-LD snippets in FULL-AUDIT-REPORT.md Appendix A–C.

See FULL-AUDIT-REPORT.pdf §4 for Book/Person JSON-LD and Appendix B for copy-paste titles/metats. KPIs 60 days post P0+P1: Indexed URLs 12+, Impressions +60–120%, LCP $\leq 2.5s$, 0 sitemap errors.
